

A True THW low-pass energy at 12.5% density**B F81 energy does not imply softmax fidelity****C Q spectrum is useful only as a coarse router****D FFN weights reject a random-matrix null****E Spectral outliers help, but do not rescue INT4****F Timestep scales help INT8, not FP8 precision****G H200 cost gate favors pooling over online FFT****H FFN activations have nonstationary THW structure****I One fixed FFN scale is not trajectory-stable**
